

16 April 2018

| | |
|----------------------------------|--|
| Delay/Scope extension on: | D15.2 – Silicon strip reference tracker at DESY |
| Delivery date in Annex 1: | M36 (April 2017) |
| Expected delivery date: | M45 (January 2019) |

The Silicon strip reference tracker at DESY is nearing completion with all the hardware being in place and assembly progressing. Recent user feedback at the BTTB6 (Beam Telescopes and Test Beams) in Zurich workshop and the last DESY Test Beam User Workshop however pointed out, that it would be even better to have a complete reconstruction suite like EU Telescope for the EUDET-style Pixel Beam Telescopes ready for the users. This will require one or two test beam weeks at DESY in fall and additional development and time for a first final analysis. Also with the recent completion of the AIDA TLU (Trigger Logic Unit), we would like to perform a full integration there as well, which requires some modifications compared to the EUDET TLU and thorough testing. Therefore, the deliverable will be moved to January 2019 (M45) to accommodate the extended scope of this deliverable.
